Application No.: 10/786,209

In The Claims

1. (Original) A method for reducing the incidence of mastitis in a dairy animal, the method comprising the step of:

topically applying an antimicrobial composition to the teats of the animal, the composition comprising (1) from about 60% to about 95% of a lipophilic polar solvent selected from the group consisting of propylene glycol, ethylene glycol, glycerol, isopropanol, and sorbitol, by weight of the composition, (2) at least two C₈ to C₁₄ fatty acids in a total amount of from about 0.5% to about 5% by weight of the composition; and (3) devoid of sufficient fatty acid ester to substantially improve the antimicrobial activity of the composition.

- 2. (Original) The method of claim 1, where the lipophilic polar solvent is propylene glycol.
- 3. (Original) The method of claim 1, where the lipophilic polar solvent is present in an amount from about 60% to about 75% by weight of the composition.

Application No.: 10/786,209

4. (Original) A method for reducing the incidence of mastitis in a dairy animal, the method comprising the step of:

topically applying an antimicrobial composition to the teats or udder of the animal, the composition comprising:

from about 50% to about 99% of a lipophilic polar solvent selected from the group consisting of propylene glycol, ethylene glycol, glycerol, isopropanol, and sorbitol, by weight of composition;

a C₈ to C₁₄ fatty acid in the total amount from about 0.5% to 5% by weight of the composition; and

devoid of sufficient fatty acid ester to substantially improve the antimicrobial activity of the composition.

- 5. (Original) The method of claim 4 wherein the composition further comprises a second C₈ to C₁₄ fatty acid.
 - 6. (Original) The method of claim 4, wherein the lipophilic polar solvent is propylene glycol.
- 7. (Original) The method of claim 4 wherein the lipophilic polar solvent is present in the amount from about 50% to about 75% by weight of composition.
- 8. (Original) The method of claim 4 wherein the lipophilic polar solvent is present in the amount from about 60% to about 99% by weight of composition.
 - 9. (Original) The method of claim 4 wherein the fatty acid is caprylic acid.
 - 10. (Original) The method of claim 4 wherein the fatty acid is capric acid.

Application No.: 10/786,209

11. (Original) A method for reducing the incidence of mastitis in a dairy animal, the method comprising the step of:

topically applying an antimicrobial composition to the teats of the animal, the composition comprising; from about 50% to 99% by weight of the composition a lipophilic polar solvent having a dielectric constant greater than 25, a C₈ to C₁₄ fatty acid in the total amount of from about 0.5% to about 5% by weight of the composition, and devoid of sufficient fatty acid ester to substantially improve the antimicrobial activity of the composition.

- 12. (Original) The method of claim 11, wherein the lipophilic polar solvent is selected from a group consisting of propylene glycol, ethylene, glycol, glycerol, isopropanol, and sorbitol.
- 13. (Original) The method of claim 11, wherein the antimicrobial composition further comprises a second C₈ to C₁₄ fatty acid.
- 14. (Original) The method of claim 11, wherein the antimicrobial composition has a pH below about 4.
- 15. (Original) The method of claim 11, wherein the antimicrobial composition further comprises a second C_{12} or C_{14} fatty acid.
- 16. (Original) The method of claim 11, wherein the composition further comprises a C₇ fatty acid.

Application No.: 10/786,209

17. (Original) A method for reducing the incidence of mastitis in a dairy animal, the method comprising the step of:

topically applying an antimicrobial composition to the teats or udder of the animal, the composition comprising:

from about 50% to about 99% of a lipophilic polar solvent having a dielectric constant greater than 25 by weight of composition;

a C₇ to C₁₄ fatty acid in the total amount from about 0.5% to 5% by weight of the composition; and

devoid of sufficient fatty acid ester to substantially improve the antimicrobial activity of the composition.

- 18. (Original) The method of claim 17 wherein the composition further comprises a second C₇ to C₁₄ fatty acid.
- 19. (Original) The method of claim 17, wherein the lipophilic polar solvent is selected from the group consisting of propylene glycol, ethylene glycol, glycerol, isopropanol, and sorbitol.
- 20. (Original) The method of claim 17 wherein the lipophilic polar solvent is present in the amount from about 50% to about 75% by weight of composition.
- 21. (Original) The method of claim 17 wherein the lipophilic polar solvent is present in the amount from about 60% to about 99% by weight of composition.
 - 22. (Original) The method of claim 17 wherein the fatty acid is caprylic acid.
 - 23. (Original) The method of claim 17 wherein the fatty acid is capric acid.

Application No.: 10/786,209

24. (Original) An antimicrobial composition for reducing the incidence of mastitis in a dairy animal, the composition comprising:

from about 50% to about 99% of a lipophilic polar solvent having a dielectric constant greater than 25, by weight of the composition;

a C₇ to C₁₄ fatty acid in the total amount of from about 0.5% to about 5% by weight of the composition; and

devoid of sufficient fatty acid ester to substantially improve the antimicrobial activity of the composition.

- 25. (Original) The antimicrobial composition of claim 24, wherein the lipophilic polar solvent is selected from a group consisting of: propylene glycol, ethylene glycol, glycerol, isopropanol, and sorbitol.
- 26. (Original) The antimicrobial composition of claim 24, wherein the composition further comprises a second C_7 to C_{14} fatty acid.
- 27. (Original) The antimicrobial composition of claim 24, wherein the antimicrobial composition has a pH below about 4.
- 28. (Currently Amended) The antimicrobial composition of claim 24, wherein the fatty acid [mixture consists] is selected from the group consisting essentially of C₇, C₈, C₉, C₁₀, C₁₂ and C₁₄ fatty acids.
